

Smart Corp. Releases HIPAA Accounting of Disclosures Solution

Smart Corp. announces the release of its accounting of disclosures solution, eDisclose. The newest addition to Smart Corp.'s line of HIPAA-compliant products, eDisclose tracks non-authorized disclosures in accordance with HIPAA's privacy rule.

According to the rule, individuals are entitled to receive an accounting of all disclosures of protected health information during the six years prior to the date of the request, or since the compliance date, whichever is later. This requirement must be met by April 14, 2003, according to HIPAA. eDisclose allows users to add, edit, sort, search and run reports on all disclosures of protected health information.

The product will be offered in a packaged solution with Smart Corp.'s Web-based release of information tracking and reporting application, eSmartlog, or as a stand-alone application for clients looking for a solution to track non-authorized disclosures.

BESLER Offers New Package of Software and Consulting Services

A new package of software and consulting services designed to address the double-edged dilemma facing today's health care providers is now being offered by BESLER. The new software will help solve the dilemma of maintaining regulatory compliance while concurrently receiving appropriate reimbursement.

Called CDM Focus Plus, the package of services combines the benefits of an automated Chargemaster monitoring system with an array of CDM consulting services designed to meet the unique needs of health care providers.

The CDM Focus Plus services include technical telephone support, targeted e-mail alerts, continuing education, quarterly compliance review, annual deficiencies review and CDM maintenance management.

Saunders Group Promises the Latest in Adjustable Back Support

The Saunders Group Inc. has launched the Back Seat[®], its latest innovation in low back pain treatment and prevention.

The patented Back Seat combines an adjustable back support with rigid side panels. When the wearer sits down, the side panels support the weight of the upper body to unload the lumbar spine by nearly 70 percent. The side panels can be removed when not needed, so the Back Seat doubles as regular back support. The

product also features an adjustable lumbar support pad to help maintain lordosis in the seated position.

Advantages of the Back Seat include improved sitting tolerance, decreased effects of gravity on the spine, less time away from work and pressure relief in the sitting position.

OPTP Introduces the SuperRoll

In Robin McKenzie's book, *Treat Your Own Back*, he states that "the most common cause of low back pain is postural stress." Training patients to have good posture is challenging because of their need to unlearn incorrect posture habits. The Original McKenzie[®] SuperRoll[™] can help retain correct sitting posture by providing continued and correct lumbar support.

The sleek design of the SuperRoll features custom, high-resiliency foam that was developed exclusively for OPTP. A plush, velvet-soft Polartek[®] velour cover complements contemporary office and automobile fabrics, and is easily removable and washable. The detachable elastic strap keeps the roll in place on most chair backs, and the strap can be removed to adhere the SuperRoll directly to a fabric-backed chair.

First Class Releases CORTRAK, The ROI Tracking System

After more than a year of studying the HIPAA regulations, discussing modifications requested by our credentialed health information professionals and clients, and programming modifications, First Class Solutions Inc.sm has released Version 4.2 of CORTRAK[®].

CORTRAK has been used as a release of information (ROI) tracking system by hospitals, clinics and ROI copy services nationwide since 1991. The core components of CORTRAK include requester information, patient information, unlimited materials sent, request type, invoicing and extensive reports. HIPAA enhancements include extensive security attributes, alerts to amendments, suspensions, restrictions, revocations and accounting for disclosure reporting.

The tracking system can be used as a single user, Web-based or network solution. The network feature allows users throughout the enterprise to access the product through secured passwords and enter disclosures for HIPAA accounting purposes.
